

Before you read this, please read our instruction: [How to install SAM 4.2](#)

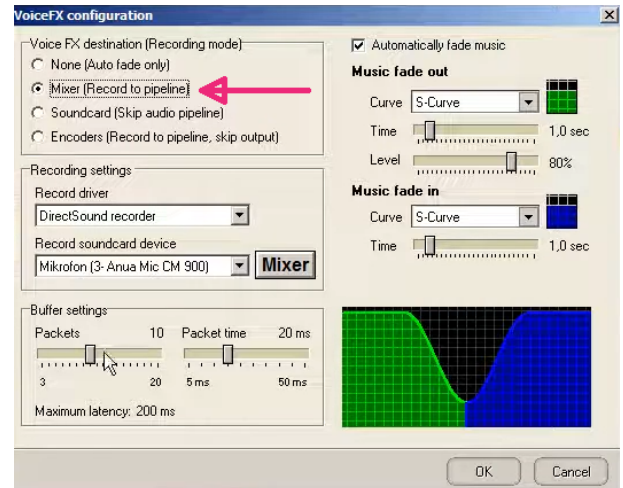

1. Look at first that VOICE FX is added at your SAM-DESKTOP

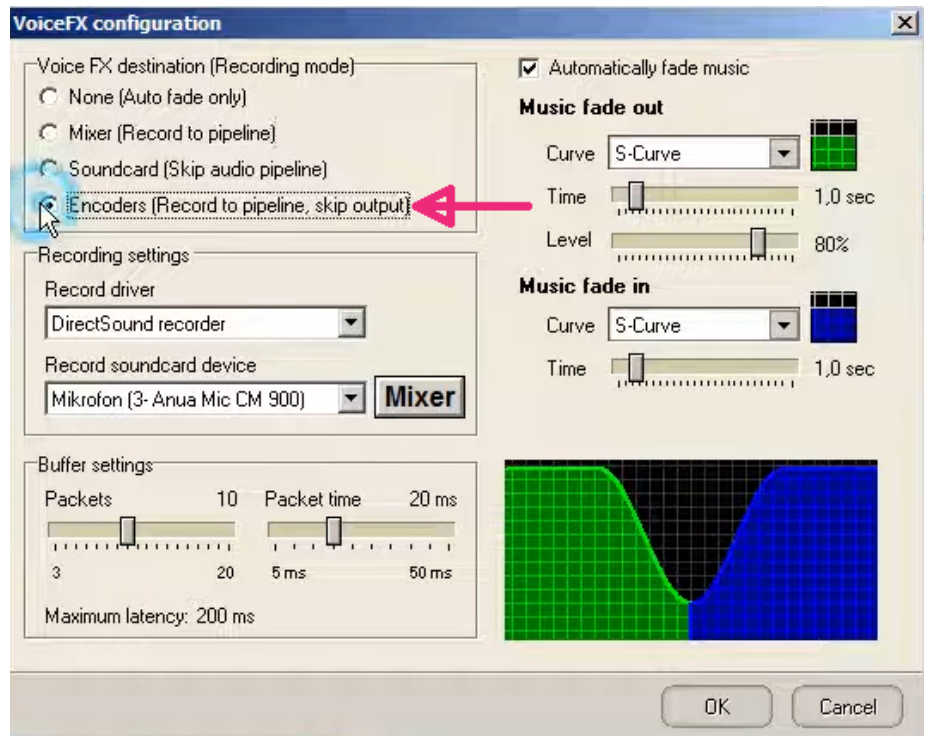

2 Click at the CONFIG-Button

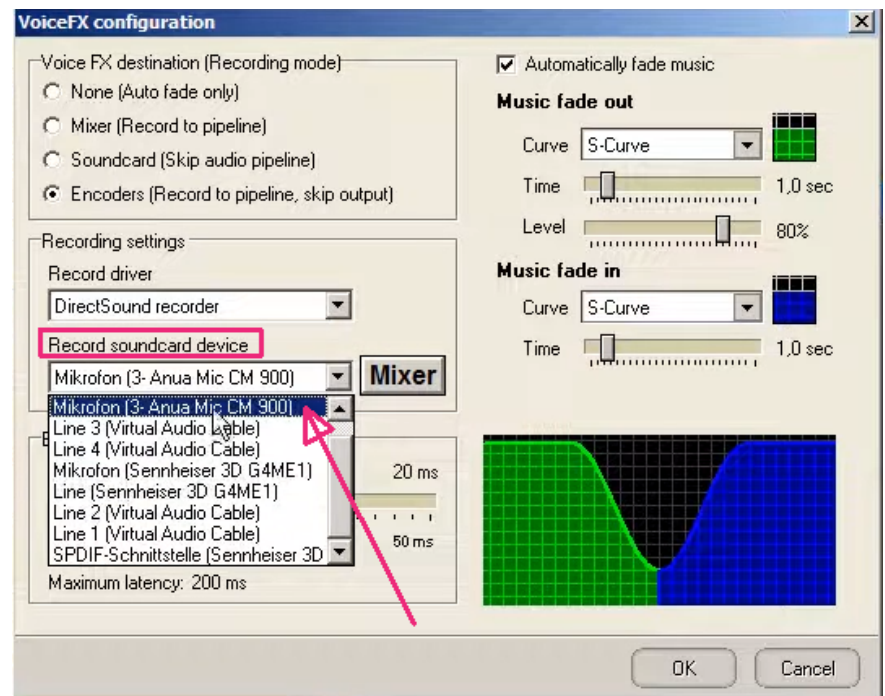

3 This will popup Voice FX Configuration as DEFAULT its setup to Mixer (Record to pipeline) which is not good, because in this setting you hear yourself too. Which is not suitable.

4 That's why we set it to ENCODER

5 Next is to select the right choice of correct Microphone Leave all the rest Settings as it is and it will work fine, with OK-Button you have done all settings.

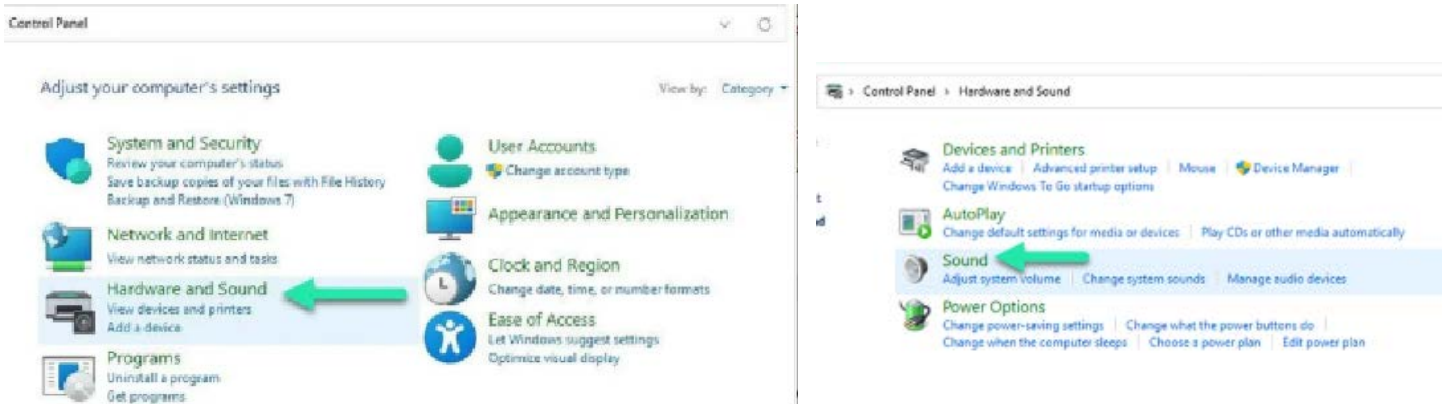

6 Now you will see that PRESS TO TALK button is active

Make sure, when you are using Microphone, your Volume-Skala should stay in green range

In yellow and red scala range, your microphone might have some tone distortion, which is not good.

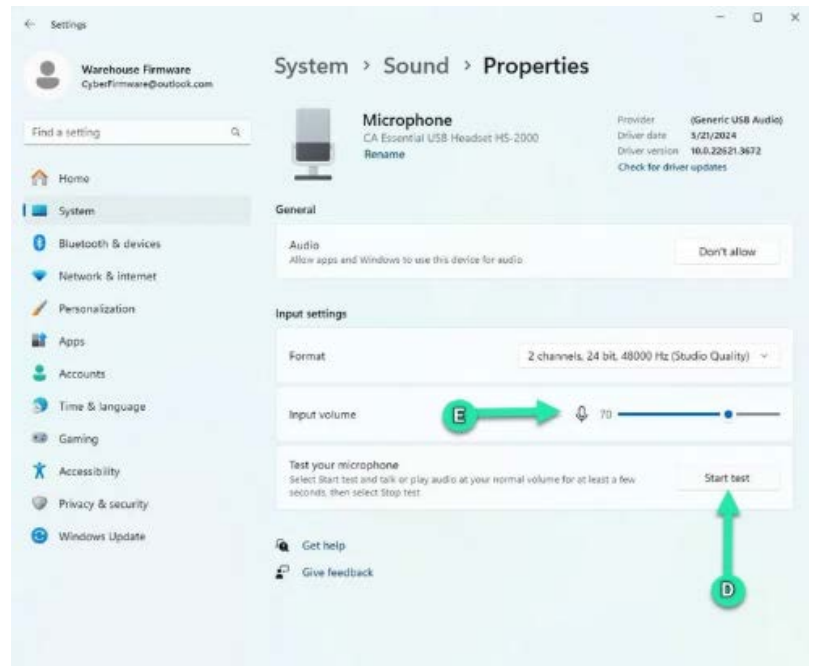

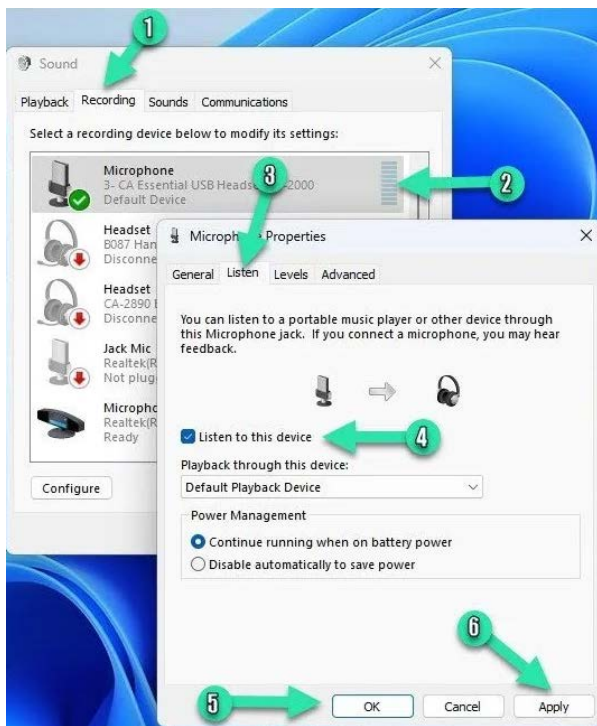

If you have still problem with your microphone setting, it might be coming from Windows internal setting. To check that, you need to in your computer CONTROL PANEL/SOUND

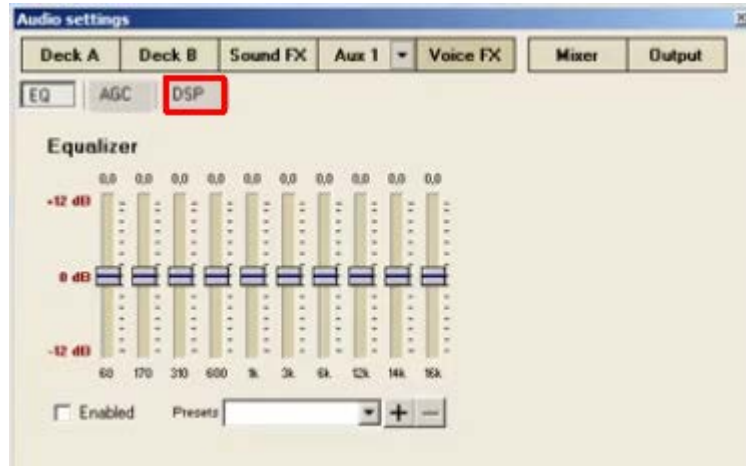

Set your USB headset as the input device

Set the microphone input volume down to somewhere in the range of 65 and 85. This ensures you won't be too loud.

If you still have further problems with your microphone setting, you can use a PLUGIN setting. This goes Via Voice FX and then Click at EQ. This will pop up a small window. Click the DSP -Button

You will see another pop-up windows and you can add a suitable Plugin under Voice FX Tab

Such Plugin are available at following sites:

[TomSteady für Winamp Download & installieren | Plugins.de](#)

[Stereo Tool - Thimeo](#)
